[57] ABSTRACT

A music-playing system for a motor vehicle that is equipped with an antenna includes a radio communications unit in the motor vehicle, an input unit for operating the radio communications unit, and a music-reproduction unit having at least one loudspeaker. One or more external radio communications units are connected via a remote data transmission line to a music storage unit. The radio communications unit in the motor vehicle is designed to receive transmitted music. The operator of the motor vehicle can communicate with the music storage unit and call up pieces of music. An ISDN connection is preferably used as the remote data transmission line.
